Digital Platforms for Tracking Environmental Performance: A Case Study of the Resilient Sydney Platform

Accessing data to measure and track environmental performance can be a challenging process. Disparate data ownership and a lack of standardised processes to obtain such data further complicate the task. This CLC commentary explores the development and impact of the Resilient Sydney Platform in addressing these challenges.

REPORT

Cambridge Road residents worked together to plan, create and maintain the greenway in their neighbourhood.

Here's How Cambridge Road Residents are Greening Their Neighbourhood from the Ground Up

As climate change takes centre stage, how can citizens lead the way for change? The community-led initiative Our Green Moulmein-Cairnhill (Our Green MoCa) shows how partnerships can pave the way for citizens to be more deeply involved in building a cohesive and resilient Singapore together.

Urban Solutions Issue #20: Science of Cities

Science is Not Enough. We Also Need Imagination

Josef Hargrave, Director and Global Foresight Leader at Arup, a global advisory on design, planning and engineering, explains why urban planners need to integrate imagination into urban planning. His work focuses on the application of future trends, scenario planning, and visioning in the built environment practice.
