LECTURE SERIES

How do cities continue to create innovation ecosystems for enterprises and start-ups? To envision future innovation districts, we look at the past and present developments that are master planned by both private agencies and private developers.

To attract world-class research talent and investments, innovation districts such as one-north challenged existing norms and pushed the envelope in its search of a new spatial experience to encourage serendipitous interactions in a growing community of knowledge and research-intensive enterprises and talents.

In this lecture, thought leaders and experts in the industry will share the vital elements required to create intellectually stimulating and creative environments in innovation districts.
